PROTECTION
THROUGH
INNOVATION

About us

Indutex S.p.A. is a 100% Italian company specialising in the production and sale of protective clothing against chemical, biological and radioactive particle contamination. Our headquarters are located in Corbetta, Milan, and we are recognised as one of Europe's leading companies in the field of personal protection.

Sector and Activities

We operate mainly in the sector of personal protective equipment (PPE) for the protection of the body from chemical, biological or radiation contamination risks.

Another area of activity is clothing for the protection of contamination-sensitive production processes, such as those used in the manufacture of pharmaceuticals and foodstuffs.

We are committed to maintaining high standards of quality and safety, thereby contributing to the protection of workers in various industrial sectors.

With almost 50 years of experience, we are one of the longest-standing companies in the sector and continue to invest in research and development to improve our products and meet the growing demands for safety at work.

We are proud to contribute to the protection of workers in high-risk environments.

It is no coincidence that we have two company mottos: **Proud to Protect Everyone**, which you will find under our institutional logo, and **Protection through Innovation**, which is associated with our Research and Development activities.

Where we are

Our headquarters are located at Via S. Francesco 8 in Corbetta, Milan, Italy, and we have production facilities in Italy, Romania and Tunisia, specifically:

ITALIA

INDUTEX S.p.A.

Via S.Francesco 8/10 - 20011 Corbetta (MI)

GI.MA.TEX. s.r.l.

Via S.Martino 15 - 37040 Zimella (VR)

We currently have a rapidly expanding production capacity of approximately 550 employees to ensure the punctuality and quality of service that our customers have come to expect.

Did you know that around **20%** of our employees also belongs to

**CONTROL
QUALITY?**

Choosing protective clothing

? How do you choose protective clothing?

1.

The first thing to identify is the physical state of the hazardous substance (GAS, LIQUID, SOLID)

2.

Next, identify the most dangerous nature of the contaminant (chemical, biological, nuclear).

3.

At this point, you can proceed to choose the product lines that are suitable for your risk.

4.

The specific characteristics of the product and the environment in which it is to be used are analysed, and the most suitable material is selected based on its mechanical strength and protective properties.

5.

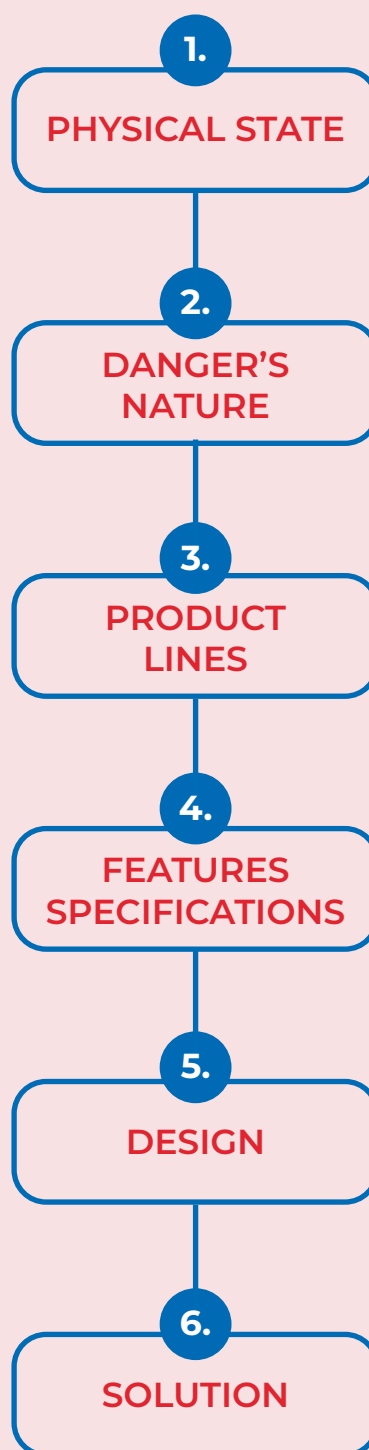

We then move on to defining the design of our PPE (ventilated or encapsulated suit, coverall, series of accessories).

6.

Finally, the available solutions are identified.

! What if I can't find what I'm looking for?

No problem! If you cannot find a product in the catalogue that meets your needs, contact us and give us all the information, we will be happy to find it for you in our portfolio or create it ad hoc.

Choosing product lines

Here is a diagram to help you understand the product lines offered by Indutex:

100% INDUTEX Product Lines

Material	Product lines	Chemical Protection Offer				
		GAS	LIQUIDS			SOLID
			Sprays	Aerosols	Splashes	
EPTAFORM	GASGUARD T1	V	V	V	V	V
TESSAFORM HD	JETGUARD PLUS HD	○	V	V	V	V
TESSAFORM	JETGUARD PLUS	X	V	V	V	V
DUOFORM HD	JETGUARD HD	X	V	V	V	V

Tychem	Made with DuPont Tychem C	X	V	V	V	V
Tyvek	Made with DuPont Tyvek	X	X	V	V	V

V = Fully Compliant

○ = Under evaluation

X = Not recommended

Once you have identified the product lines suitable for your risk, you will need to identify and select the material most suitable for your risk.

Choosing the most suitable material

Choosing the most suitable material for your needs starts with considering the type of contaminant you are dealing with and the mechanical resistance requirements that the fabrics must meet.

Each fabric will have its own classification based on the performance obtained in specific tests, and the class is used for different purposes:

1. As a criterion for accepting materials
2. As a selection parameter
3. As an element of comparison

Manufacturers are required to specify the test pass class in order to communicate the range within which the product falls.

Below are the results of the main tests:

Abrasion resistance (EN 530)	Class 6	> 2000 cycles
	Class 5	> 1500 cycles
	Class 4	> 1000 cycles
	Class 3	> 500 cycles
	Class 2	> 100 cycles
	Class 1	> 10 cycles

Trapezoidal tear resistance (EN ISO 9073-4)	Class 6	> 150 N
	Class 5	> 100 N
	Class 4	> 60 N
	Class 3	> 40 N
	Class 2	> 20 N
	Class 1	> 10 N

Tear resistance method (EN ISO 13934-1)	Class 6	> 100 N
	Class 5	> 500 N
	Class 4	> 250 N
	Class 3	> 100 N
	Class 2	> 60 N
	Class 1	> 30 N

Did you know that Indutex has a

**CONSULTANCY
SERVICE**

Write to info@indutexspa.com indicating your working conditions and the chemical agents involved, and our experts will guide you in choosing the right materials.

Puncture resistance (EN 863)	Class 6	> 250 N
	Class 5	> 150 N
	Class 4	> 100 N
	Class 3	> 50 N
	Class 2	> 10 N
	Class 1	> 5 N

Resistance to flexural tearing (EN 7854)	Class 6	> 100.000 cycles
	Class 5	> 40.000 cycles
	Class 4	> 15.000 cycles
	Class 3	> 5.000 cycles
	Class 2	> 2.500 cycles
	Class 1	> 1.000 cycles

Burst resistance (EN 13938-1)	Class 6	> 850 kPa
	Class 5	> 640 kPa
	Class 4	> 320 kPa
	Class 3	> 160 kPa
	Class 2	> 80 kPa
	Class 1	> 40 kPa

Once the range of mechanical properties required for protection has been established, the necessary chemical or biological resistance is determined.

Two test methods are used to verify the resistance of the fabric to chemical agents:

- **Resistance to liquid penetration** simulating contact with small splashes of liquid substances.
- **Resistance to chemical permeation**, which determines the number of minutes a fabric can withstand contact with a liquid chemical agent before it passes through the protection at a limit speed of one microgram per square centimeter..

To verify the fabric's resistance to biological agents, five different tests are carried out: one preliminary test and four tests to determine performance.

Choosing the most suitable material

CHEMICAL PROTECTION PROPERTIES

Resistance to liquid penetration (EN ISO 6530) – Penetration %	Class 3	< 1%
	Class 2	< 5%
	Class 1	< 10%
Resistance to liquid penetration (EN ISO 6530) – Resistance %	Class 3	> 95%
	Class 2	> 90%
	Class 1	> 80%
Resistance to chemical permeation (EN ISO 6529)	Class 6	> 480 min.
	Class 5	> 240 min.
	Class 4	> 120 min.
	Class 3	> 60 min.
	Class 2	> 30 min.
	Class 1	> 10 min.

BIOLOGICAL PROTECTION PROPERTIES

Resistance to penetration by pathogens under hydrostatic pressure (ISO 16604)	Class 6	> 20 kPa
	Class 5	> 14 kPa
	Class 4	> 7 kPa
	Class 3	> 3,5 kPa
	Class 2	> 1,75 kPa
	Class 1	> 0 kPa
Resistance to penetration by infectious agents through contact with contaminated surfaces (ISO 22610)	Class 6	> 75 min.
	Class 5	> 60 min.
	Class 4	> 45 min.
	Class 3	> 30 min.
	Class 2	> 15 min.
	Class 1	≤ 15 min.
Resistance to penetration by contaminated aerosols (ISO 22611)	Class 3	Log > 5
	Class 2	Log > 3
	Class 1	Log > 1
Resistance to penetration by contaminated solid particles (ISO 22612)	Class 3	≤ 1 Log cfu
	Class 2	≤ 2 Log cfu.
	Class 1	≤ 3 Log cfu.

Circularity and Sustainability

Following the publication of Directive (EU) 2018/851 on improving waste management, INDUTEX has entered into a partnership with ESO for the collection and recovery of used PPE for disposal.

Back to Work is a collection service for used (or unusable) PPE, such as overalls, gloves and masks, safety shoes and protective helmets.

In this way, INDUTEX supports and promotes the circular economy to give new life and value to products through a recycling process carried out at the ESO RECYCLING plant on waste that would otherwise end up in landfill.

Visit **backtowork.eso.it** to find out how the service works.

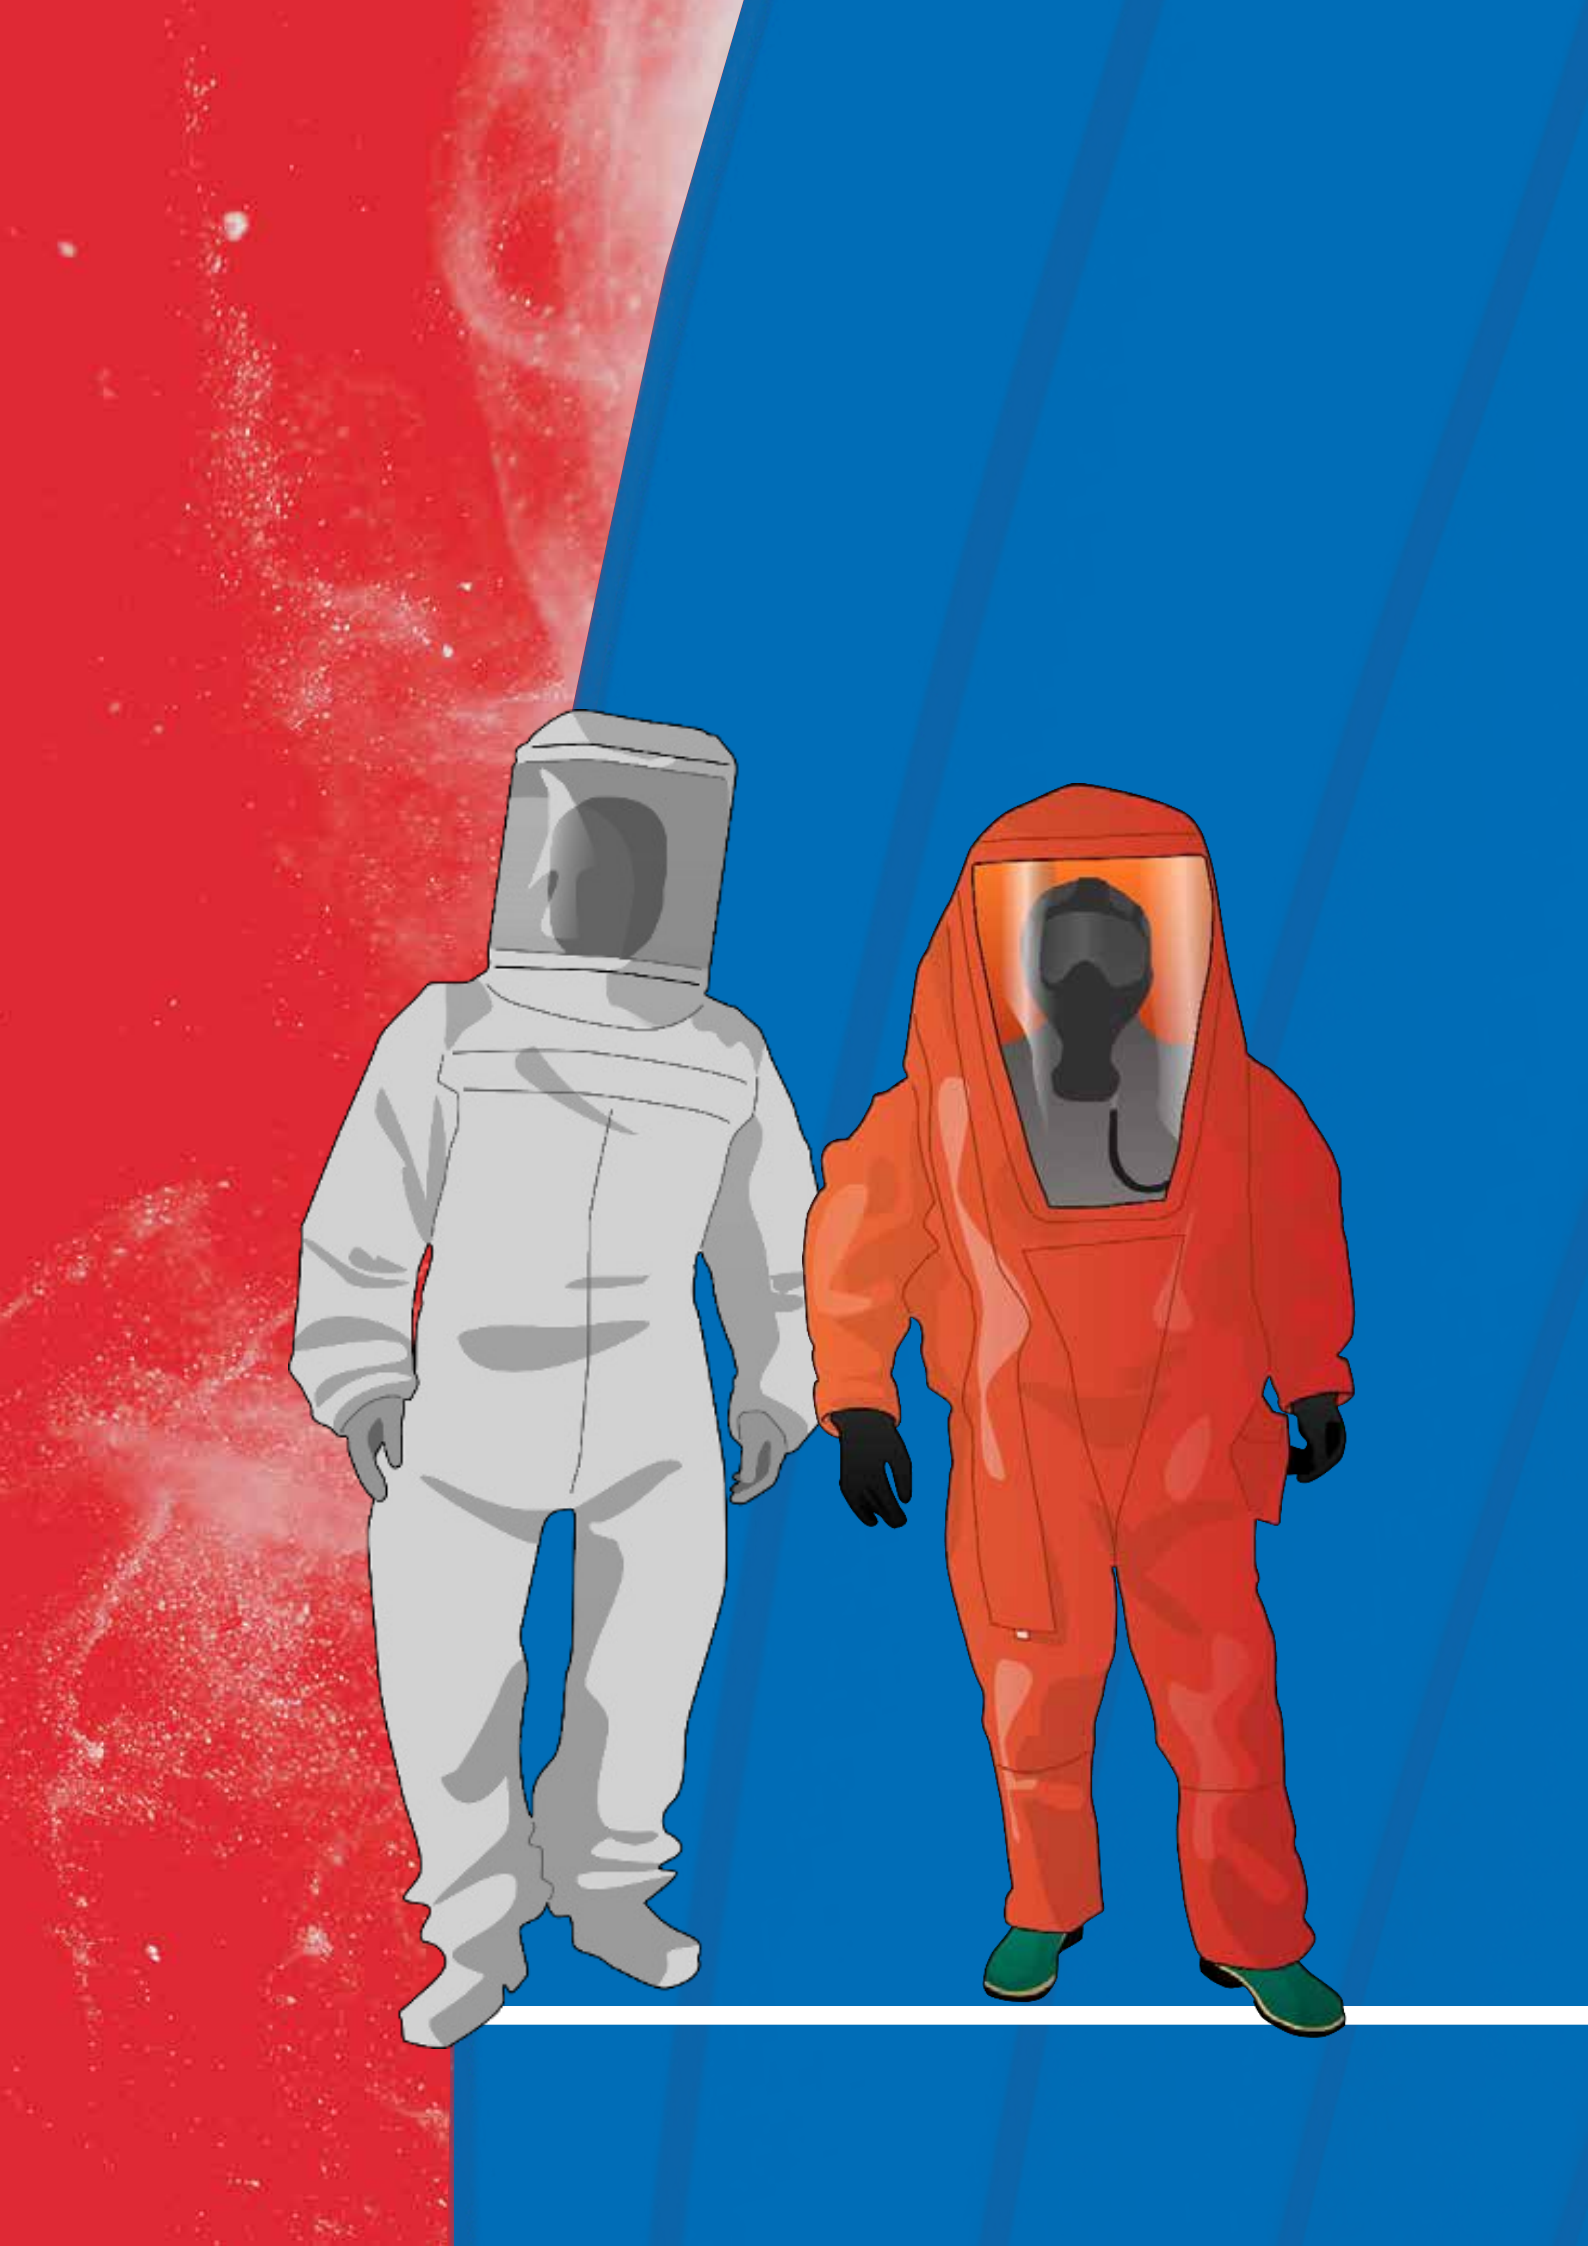

If you are interested in receiving further information about the **Back to Work service**, how to activate it and receive ESO Boxes for the collection of used PPE, please contact us and we will be happy to provide you with all the details.

GASGUARD® Insulated Protective Suit

GASGUARD

Chemical, biological and nuclear protective suit particularly suitable when the operator is in contact with chemical substances in the form of **gases, liquids or particles, with airborne biological agents, both liquid and solid**, and through contact by rubbing.

Gasguard®T1 garments are made from **Eptaform®** raw material, assembled with external and internal heat-sealed seams, and designed to be ergonomic while offering high resistance in critical areas where mechanical stress is greatest during movement. The design allows for the accommodation of all types of breathing apparatus currently on the market.

Certifications:

- PPE Category 3 Type 1a-b-ET
- Chemical Protection (EN 943-1; EN 943-2)
 - Biological Protection (EN 14126)
 - Nuclear Protection (EN 1073-2)

Available versions:

Main design:

Includes space for housing a self-contained breathing apparatus (SCBA) and features sealed seams for added protection.

- Chemical protection underglove,
- Butyl overglove,
- Internal pocket,
- Integrated sock with ankle cover band

Available options:

- Dynat metal zip
- Masterseal zip
- CEJN external power connection
- STAUBLI external supply connection

The Indutex, Eptaform® and Gasguard® logos are registered trademarks of Indutex SpA

Ventilation systems

Air Network (AIRFED/AIRLINE)

AIRFED or AIRLINE ventilation systems are personal protective equipment designed to ensure respiratory safety in contaminated environments.

Main features:

- **Operation:** These systems use a medium-pressure breathable air source (approximately 3-5 bar) to ventilate the interior of protective clothing.
- **Protection:** They offer effective protection against chemical, biological and particulate agents, making them ideal for work in confined spaces, welding, painting and pharmaceutical industries.
- **Comfort:** Thanks to the ventilation system, they reduce operator fatigue, as they do not require significant respiratory effort. This is particularly advantageous during long shifts.
- **Operating autonomy:** Airline systems can operate continuously when connected to suitable compressors, providing adequate autonomy for long operations.

Applications

Airline systems are used in various sectors, including:

- **Chemical Industry:** To protect workers from exposure to hazardous chemicals.
- **Healthcare Sector:** In emergency situations or during procedures that generate potentially infectious aerosols, or in environments with high biosafety standards (BSL-3 and BSL-4).
- **Construction and Maintenance:** During activities such as sandblasting or painting, where natural ventilation may not be sufficient.

In summary, Airline ventilation systems offer an effective and comfortable solution for respiratory protection, improving operator safety in high-risk environments.

Certifications:

Respiratory protection (EN 14594)*

Powered Air Purifying Respirator (PAPR)

PAPR (Powered Air Purifying Respirators) ventilation systems are personal protective equipment designed to ensure respiratory safety in contaminated environments.

Main features:

- **Operation:** PAPR devices use an electric fan to draw in air from the surrounding environment, which is then filtered through specific filters to remove pollutants, dust, fumes and toxic gases. The purified air is then supplied to the operator, creating a constant air flow that improves breathing comfort.
- **Protection:** They offer effective protection against chemical, biological and particulate agents, making them ideal for work in confined spaces, welding, painting and pharmaceutical industries.
- **Comfort:** Thanks to the ventilation system, PAPR respirators reduce operator fatigue, as they do not require significant breathing effort. This is particularly suitable during long shifts.
- **Battery life:** PAPR systems run for several hours on a single charge, depending on the model and conditions of use, providing adequate autonomy for long operations.

Applications

PAPR respirators are used in various sectors, including:

- **Chemical Industry:** To protect workers from exposure to hazardous chemicals.
- **Healthcare sector:** In emergency situations or during procedures that generate potentially infectious aerosols.
- **Construction and Maintenance:** During activities such as sandblasting or painting, where natural ventilation may not be sufficient.

In summary, PAPR ventilation systems offer an effective and comfortable solution for respiratory protection, improving operator safety in high-risk environments.

NB: The working environment must have a minimum oxygen content of 17%.

JETGUARD® PLUS & PLUS HD Ventilated Suit

JETGUARD
PLUS

JETGUARD
PLUS HD

Chemical, biological and nuclear protective suit with antistatic properties, particularly suitable if the operator is in contact with industrial chemicals in the form of jets, aerosols or particles, with airborne biological agents, both liquid and solid, and through contact by rubbing.

The garment also offers protection against chemical warfare agents (CWAs)

Jetguard® PLUS garments are made from Tessaform® raw material, while Jetguard® PLUS HD garments are made from Tessaform® HD, a natural evolution of the range offering even higher performance.

Assembled with heat-sealed external tape and designed to be ergonomic while offering high resistance in critical areas where mechanical stress is greatest during movement.

Certifications:

- PPE Category 3 Type 3-b
- Chemical protection (EN 14605)
- Biological protection (EN 14126)
- Nuclear protection (EN 1073-1)*
- Respiratory protection (EN 14594 for AIRFED versions)* (EN 12941 for PAPR versions)*

**checks in progress*

Antistatic according to EN 1149-5:2018

Available versions:

Compatible AIRFED systems:

- Indutex Airline FC 290 series

Compatible PAPR systems:

- Kasco
- CleanAIR® Chemical 2F Plus & Ex

Visor:

- Classic rectangular
- Panoramic "roof-top"
- Trapezoidal

Exhalation system:

- Overpressure valves
- Filter screens

Upper part:

- Classic elasticated cuff with thumb loops
- Elasticated cuff with oversleeves
- Integrated gloves
(chosen based on risk)

Lower part:

- Sock and overboots
- Footwear with antistatic soles
- Footwear with non-slip soles
- Footwear with Aquagrip soles
- Soles with ESD (Electrostatic Dissipative) properties
(optional on all shoe versions)

Features common to all models:

- Double zip closure and protective flap (vertical for the version with trapezoidal visor)
- Ergonomic design
- 10 years of storage without maintenance

SPRAYGUARD® Ventilated Suit

SPRAYGUARD

Chemical, biological and nuclear protective suit with antistatic properties, particularly suitable if the operator is in contact with chemicals in the form of aerosols or particles, with airborne biological agents, both liquid and solid, and in contact through friction.

Particularly useful for BSL-3 and BSL-4 containment environments or in production environments.

Sprayguard® garments are made from Puntiform® raw material and assembled with external tape. They are designed to be ergonomic while offering high resistance at critical points where mechanical stress is greatest during movement.

Certifications:

- PPE Category 3 Type 4-b
- Chemical protection (EN 14605)
- Biological protection (EN 14126)
- Nuclear protection (EN 1073-1)*
- Respiratory protection (EN 14594 for AIRFED versions)* (EN 12941 for PAPR versions)*

**verifications in progress*

Antistatic according to EN 1149-5:2018

Available versions:

JETGUARD® & HD Coverall

TOPGUARD®

Chemical, biological and nuclear protective suit with antistatic properties, particularly suitable when the operator is in contact with industrial chemicals in the form of jets, aerosols or particles, with airborne biological agents, both liquid and solid, and through contact by rubbing.

Jetguard® garments are made with Duoform® raw material, while Jetguard® HD garments are made with Duoform® HD, a natural evolution of the range offering even higher performance.

Assembled with heat-sealed external tape and designed to be ergonomic while offering high resistance in critical areas where mechanical stress is greatest during movement.

Certifications:

- PPE Category 3 Type 3-b
- Chemical protection (EN 14605)
- Biological protection (EN 14126)
- Nuclear protection (EN 1073-2)*

**tests currently being completed for the HD version*

Antistatic according to EN 1149-5:2018

Available versions:

Design:

- With stand-up collar
- With ergonomic hood and chin flap
- With butyl rubber visor

Upper part:

- Classic elasticated cuffs with thumb loops
- Elasticated cuffs with oversleeves
- Integrated gloves (*chosen based on risk*)

Lower part:

- Elasticated ankles
- Sock and overboots
- Simple footwear
- Shoes with antistatic soles
- Footwear with non-slip sole
- Shoe with Aquagrip sole
- Soles with ESD (Electrostatic Dissipative) properties (*optional on all bootie versions*)

Features common to all models:

- Elasticated waistband
- Front zip protected by double adhesive flap
- Heat-sealed seams with Topguard® manufacturing technology

The Indutex, Duoform® and Jetguard® logos are registered trademarks of Indutex SpA

Accessories

JETGUARD® lines

TOPGUARD®
TECHNOLOGY THAT MAKES THE DIFFERENCE

Line of chemical and biological protection accessories with antistatic properties, particularly suitable when the operator is in contact with industrial chemicals in the form of jets, aerosols or particles, with airborne biological agents, both liquid and solid, and through contact by rubbing.

The accessory lines that fall under this type are as follows:

Jetguard®
Jetguard® HD
Jetguard® PLUS
Jetguard® PLUS HD

If you cannot find the accessory you are looking for, please write to us at vendite@indutexspa.com

and we will be happy to assist you and combine designs and materials to meet your needs.

Certifications:

- PPE Category 3 Type PB[3]-b
- Chemical protection (EN 14605)
- Biological protection (EN 14126)

Antistatic according to EN 1149-5:2018

Available versions:

Head:

- Simple caps
- Elongated caps

Body:

- Gowns with back and front closure
- Aprons
- Jackets
- Trousers
- Sleeves in various sizes

Lower part:

- Simple footwear
- Shoes with antistatic soles
- Footwear with non-slip soles
- Footwear with Aquagrip soles
- Soles with ESD (Electrostatic Dissipative) properties (*optional on all shoe versions*)

Features common to all models:

- Ergonomic design
- Maintenance-free service life
- Manufactured using taping or welding technology (seamless)
- Topguard® manufacturing technology

SPRAYGUARD® CLEANGUARD® & PE coverall

SPRAYGUARD CLEANGUARD

TOPGUARD®

Chemical, biological and nuclear protective suit with antistatic properties, particularly suitable when the operator is in contact with water-based chemicals in the form of aerosols or particles, with airborne biological agents, both liquid and solid, and through contact by rubbing.

Sprayguard® and Cleanguard® garments are made from Puntiform® raw material, while Sprayguard® PE and Cleanguard® PE garments are made with Puntiform® PE, which, thanks to its entirely polyethylene structure, is perfectly suited for shaping and creating garments that are not only effective but also extremely comfortable.

Cleanguard® versions feature technical features designed for use in controlled pharmaceutical contamination environments and are also used as components for sterile kits.

Certifications:

- PPE Category 3 Type 4-b
- Chemical protection (EN 14605)
- Biological protection (EN 14126)
- Nuclear protection (EN 1073-2)

Antistatic according to EN 1149-5:2018

Available versions:

Design:

- With stand-up collar
- With ergonomic hood and chin flap
- With butyl rubber visor

Upper part:

- Classic elasticated cuffs with thumb loops
- Elasticated cuff with oversleeves
- Integrated gloves (*chosen according to risk*)

Lower part:

- Elasticated ankles
- Sock and overboots
- Simple footwear
- Shoes with antistatic soles
- Footwear with non-slip soles
- Shoes with Aquagrip soles
- Soles with ESD (Electrostatic Dissipative) properties (*optional on all versions of footwear*)

Features common to all models:

- Elasticated waistband
- Front zip protected by adhesive flap
- Seams covered with Topguard® manufacturing technology

PARTIGUARD® & PE Overall

PARTIGUARD

Chemical, biological and nuclear protective suit with antistatic properties, particularly suitable when the operator is in contact with water-based chemicals in the form of particles and occasional splashes, with airborne biological agents, both liquid and solid, and through contact by rubbing.

Partiguard® garments are made from Puntiform® raw material, while Partiguard® PE garments are made from Puntiform® PE, which, thanks to its entirely polyethylene structure, is perfectly suited to being moulded and used to create garments that are not only effective but also extremely comfortable.

The Partiguard® TB versions have a Propguard® back, which increases comfort without compromising their intended use.

Certifications:

PPE Category 3 Type 5-b – 6-b

- Chemical protection (EN ISO 13982-1, EN 13034)
- Biological protection (EN 14126)
- Nuclear protection (EN 1073-2)

Antistatic according to EN 1149-5:2018

Available versions:

Design:

- With stand-up collar
- With ergonomic hood
- With butyl rubber visor

Upper part:

- Classic elasticated cuff with thumb loops
- Stretch cuff with oversleeves
- Integrated gloves (*chosen based on risk*)

Lower part:

- Elasticated ankles
- Sock and overboots
- Simple footwear
- Shoes with antistatic soles
- Footwear with non-slip sole
- Shoe with Aquagrip sole
- Soles with ESD (Electrostatic Dissipative) properties (*optional on all bootie versions*)

Features common to all models:

- Elasticated waistband
- Front zip protected by adhesive flap

PROPGUARD®

Coverall

PROPGUARD

Chemical and nuclear protective suit with antistatic properties, particularly suitable when the operator is in contact with particles and occasional splashes of water-based chemicals.

Propguard® garments are made with latest-generation SMS that combines high particle resistance, low particle release and excellent thermal comfort.

These characteristics make Propguard® particularly versatile for both industrial and pharmaceutical use.

Certifications:

- PPE Category 3 Type 5 – 6
- Chemical protection (EN ISO 13982-1, EN 13034)
- Nuclear protection (EN 1073-2)

Antistatic according to EN 1149-5:2018

Available versions:

Design:

- With stand-up collar
- With ergonomic hood

Upper part:

- Classic elasticated cuffs
- Classic elasticated cuffs with thumb loops
- Elasticated cuff

Lower part:

- Elasticated at the ankles
- Antistatic sole
- Footwear with non-slip sole
- Footwear with Aquagrip sole
- Soles with ESD (Electrostatic Dissipative) properties (*optional on all shoe versions*)

Features common to all models:

- Elasticated waistband
- Front zip protected by flap

The Indutex and Propguard® logos are registered trademarks of Indutex SpA

EASYGUARD® 300, 400, 500

Overall

Certifications:

- Chemical protection (EN ISO 13982-1, EN 13034)*
 - Chemical protection (EN 14605)**
 - Biological protection (EN 14126)**
 - Nuclear protection (EN 1073-2)
- Antistatic according to EN 1149-5:2018

* **model 500** ** **models 400 and 300**

Available versions:

Easyguard 500 Type 5-6
Easyguard 400 Type 4b
Easyguard 300 Type 3b

Design

- With ergonomic hood
- Classic elasticated cuffs
- Elasticated ankles
- Elasticated waist
- Front zip protected by adhesive flap

Imported product

Series of suits for basic protection against liquid and solid chemical products.

Easyguard 300 offers protection against liquid splashes and biological agents (Type 3-b).

Easyguard 400 offers protection against liquid aerosols and biological agents (Type 4-b).

Easyguard 500 offers protection against particles and liquid splashes (Type 5 and 6).

They offer the simplest protection for everyday work where Category 3 clothing is required.

Please always consult us to find the solution that best suits your needs, as a higher level of protection may be required, even with the same EU certification.

**CLOTHING
WITH MATERIAL
DUPONT™**

DuPont™ Tychem® TK Encapsulated Suit

Chemical, biological and nuclear protective suit particularly suitable when the operator is in contact with chemicals in the form of **gases, liquids or particles**, with **airborne biological agents**, both **liquid and solid**, and through contact by rubbing.

DuPont™ Tychem® TK garments are assembled with external and internal heat-sealed seams and are designed to be ergonomic while offering high resistance at critical points where mechanical stress is greatest during movement. The design allows for the accommodation of all types of breathing apparatus currently on the market.

Certifications:

- PPE Category 3 Type 1a-b-ET
- Chemical Protection (EN 943-1; EN 943-2)
 - Biological Protection (EN 14126)
 - Nuclear Protection (EN 1073-2)

Available versions:

Main design:

Includes space for housing a self-contained breathing apparatus (SCBA) and features sealed seams for added protection.

- Chemical protection underglove,
- Neoprene overgloves,
- Dynat metal zip

Available options:

- Integrated sock with boot cover band
- Integrated Hazmax boot

Accessories

Made with DuPont™ Tyvek®

Accessories for protection against minor risks and to keep personal clothing free from industrial dirt.

The Made with DuPont™ Tyvek® series was created to meet the need for practical, lightweight and versatile clothing to protect garments from dirt, grease and non-hazardous dust.

Made with original DuPont™ Tyvek® raw material and manufactured at Indutex production sites within the European Union or in the Mediterranean basin, they ensure maximum performance and design.

The possibility of promoting these items to a higher category is currently being considered.

Sterile Disposable Lines

CLEANGUARD®

SPRAYGUARD®

PARTIGUARD®

CLEANGUARD

Sterile product lines made with Puntiform® and Puntiform® PE raw materials for use in aseptic, electronic and pharmaceutical environments.

Indutex can provide multiple solutions, packaged in its certified laboratories, including using its Topguard® production method, in the form of kits typically consisting of:

Korean collar coveralls, shoe covers with non-slip soles and hoods with integrated surgical masks or FFPx masks.

Accessories such as half-sleeves and shoe covers are also available, as are the individual components of the kit, as well as kits containing more or fewer items, depending on requirements.

You can choose between different sterilization methods, either irradiation or gas autoclave.

For these latter methods, a study is available that demonstrates the non-permanence of toxic elements after sterilization.

Indutex products are manufactured exclusively in the European Union or the Mediterranean basin, while packaging and sterilization take place exclusively in Italy.

Certifications:

PPE Category 1 and 3

Please see the details for the different EU certifications

Available versions:

Design:

- Kit
- Suits
- Ventilated Suits
- Caps
- Hoods
- Gowns
- Booties
- Shoe covers

Sterilizations methods:

- Ethylene oxide (EO)
- Beta rays (e-beam)
- Hydrogen Peroxide (VHP)*

**under evaluation*

CLEANGUARD®

Accessories

CLEANGUARD

TOPGUARD®
TECHNOLOGY THAT MAKES THE DIFFERENCE

Line of chemical and biological protection accessories, particularly suitable when the operator is in contact with chemicals in the form of aerosols or particles, with airborne biological agents, both liquid and solid, and through contact by rubbing.

The Cleanguard® lines are primarily designed for use in the pharmaceutical or hospital sector, given their special design and packaging.

The accessory lines that fall into this category are as follows:

- Cleanguard®
- Cleanguard® PE

If you cannot find the accessory you need, please write to us at vendite@indutexspa.com and we will be happy to assist you and combine designs and materials to meet your needs.

Certifications:

- PPE Category 3 Type PB[4]-b
- Chemical protection (EN 14605)
- Biological protection (EN 14126)

Antistatic according to EN 1149-5:2018

DM Class I

Available versions:

Head:

- Simple caps
- Caps with type II-R surgical mask
- Caps with FFP2
- FFP3 caps
- Type II-R surgical masks

Corpo:

- Surgical gowns
- Sleeves in various sizes

Lower part:

- Plain shoes
- Shoes with antistatic soles
- Footwear with non-slip soles
- Shoes with Aquagrip soles
- Soles with ESD (Electrostatic Dissipative) properties (*optional on all shoe versions*)

Features common to all models:

- Ergonomic design
- Maintenance-free service life
- Manufactured using taping or welding technology (seamless)
- Topguard manufacturing technology

Sterile Disposable Line Made with DuPont™ Tyvek®

Sterile product lines made with DuPont™ Tyvek® raw material for use in aseptic, electronic and pharmaceutical environments.

Indutex can provide multiple solutions, packaged in its certified laboratories, including using its Topguard® production method, in the form of kits typically consisting of:

Korean collar coveralls, shoe covers with non-slip soles and hoods with integrated surgical masks or FFPx masks.

Accessories such as half-sleeves and shoe covers are also available, as are the individual components of the kit, as well as kits containing more or fewer items, depending on requirements.

You can choose between different sterilization methods, either irradiation or gas autoclave.

For the latter methods, a study is available that demonstrates the non-permanence of toxic elements after sterilization.

Indutex products are manufactured exclusively in the European Union or the Mediterranean basin, while packaging and sterilization take place exclusively in Italy.

Certifications:

PPE Category 1 and 3

Please see the details for the different EU certifications

Available versions:

Design:

- Kit
- Suits
- Caps
- Hoods
- Gowns
- Booties
- Shoe covers

Sterilizations methods:

- Ethylene oxide (EO)
- Beta rays (e-beam)
- Gamma rays**
- Hydrogen Peroxide (VHP)*

PROPGUARD® / POLIGARD®

Sterile Disposable Lines

PROPGUARD

Sterile product lines made with polypropylene-based raw materials for use in aseptic, electronic and pharmaceutical environments.

Indutex can provide multiple solutions, packaged in its certified laboratories, including using its Topguard® production method, in the form of kits typically consisting of:

A Korean-style coverall, boots with non-slip soles and a hood with an integrated surgical mask or FFPx mask.

FFP2 and FFP3 filter face masks are also available.

Accessories such as half-sleeves and shoe covers are also available, as are the individual components of the kit, as well as kits containing more or fewer items, depending on requirements.

These items can only be sterilized with ethylene oxide or hydrogen peroxide (method currently under evaluation) so as not to compromise their mechanical characteristics. A study has been conducted demonstrating the non-permanence of toxic elements after sterilization.

Indutex products are manufactured exclusively in the European Union or the Mediterranean basin, while packaging and sterilization take place exclusively in Italy.

Cleanroom and disinfection wipes

Micropure wipes are specifically designed for use in clean rooms, highly controlled environments where air purity is critical. These wipes offer unique features that help maintain the integrity and sterility of workspaces.

Applications

Micropure cloths are used in various sectors, including:

- **Pharmaceutical Industry:** For cleaning surfaces and equipment, ensuring that there is no contamination during production processes.
- **Microelectronics:** Essential for maintaining semiconductor production environments, where even the smallest particle can compromise product quality.
- **Food Industry:** Used to ensure that work surfaces are maintained in strict hygienic conditions.

Cleanguard IPA Wipes are designed for effective surface disinfection in controlled environments, such as clean rooms and sensitive production areas. These wipes offer an excellent combination of convenience and performance, making them ideal for applications in sectors such as pharmaceuticals and microelectronics.

Applications

Cleanguard IPA Wipes are ideal for:

- **Disinfection of Hard Surfaces:** Perfect for cleaning tables, instruments and equipment in sensitive environments.
- **Pharmaceutical and Biotech Sector:** Used to maintain hygiene and sterility during production processes.
- **Electronics Industry:** Essential for cleaning surfaces in semiconductor manufacturing environments.

Available versions:

SUITS AND ACCESSORIES

POLIGARD® & HD Overall

Coverall for protection against minor risks and to protect personal clothing from industrial dirt.

The Poligard® series was created to meet the need for practical, lightweight and versatile clothing to protect garments from dirt, grease and non-hazardous dust. The name Poligard® characterises Indutex garments made of polypropylene or polyethylene (Poligard® HD) using spunbonded technology and is followed by a number indicating the weight per square metre.

The Absorbent version has hydrophilic properties and is ideal as an absorbent undergarment.

Starting with Poligard® 50 and for all HD versions, the material also has antistatic properties to increase comfort and usability.

The possibility of promoting these items to a higher category is currently being studied.

Certifications:

PPE Category 1*

**Category 2 under evaluation for some models*

Antistatic treatment for greater comfort starting from 50 g/m²

Available versions:

Design:

- With stand-up collar
- With ergonomic hood

Upper part:

- Simple sleeve bottom
- Classic elasticated cuffs
- Classic elasticated cuffs with thumb loops
- Covered elasticated cuff
- External or internal chest pocket

Bottom:

- Elasticated ankles
- Insole brackets
- Antistatic sole
- Front or rear pockets

Available weights:

- From 30 to 70 g/m² for Poligard
- From 40 to 70 g/m² for Poligard HD

Origin of goods:

- Own production in the European Union or Mediterranean basin
- Imported (only certain models/versions)

Complementary Products Made with DuPont™ Tyvek®

Indutex also manufactures a whole range of complementary items that are useful for completing the various equipment sets.

The Made with DuPont™ Tyvek® series was created to meet the need for a product that combines the quality and unique characteristics of the original DuPont™ Tyvek® raw material with Indutex design.

Manufactured at Indutex production sites within the European Union or in the Mediterranean basin, also using Topguard® technology, they ensure maximum performance and quality.

Available versions:

- Round covers
Made with DuPont™ Tyvek® antistatic and non-antistatic, autoclavable, with diameters ranging from 8 to 229 cm.
- Shaped covers
- Bags
- Sheets
- Wheel covers
- Gun covers

**Are you looking for a particular model
in DuPont™ Tyvek®
that you cannot find?**
Write to us at:
info@indutexspa.com
and we will help you find it in our
portfolio or create it from scratch

Various

The wide range of Indutex products also includes complementary items that are not classified in specific categories or that cut across them, but which are useful for completing the various kits.

These include, in a variety of materials:

- Hats and caps
- CPE shoe covers
- Aprons, smocks and half-sleeves
- Trolley covers and barrel covers
- Sheets and blankets

Special mention should be made of Sticky Mat adhesive mats, available in various sizes, for contamination control (with antibacterial efficiency), specifically designed to reduce the entry of dust from footwear and particulates that can contribute to increased particle and/or microbiological contamination in controlled contamination environments, nuclear power plants, hospitals and medical areas, of dust from footwear and particulates that can contribute to increased particle and/or microbiological contamination.

The “Sticky Mat” carpet combines the mechanical action of the adhesive, which traps impurities on the soles of shoes or the wheels of service trolleys, with the antibacterial action of the broad-spectrum biocide, which acts mainly on bacterial spores, fungi and yeasts.

These items also include TOP-GUARD® CBRN Protective Tape, an adhesive tape with tested resistance to chemical agents, designed to protect the joints between protective clothing and accessories such as gloves, masks, boots, etc.
